

## ZOIDLoader Program

The ZOID2/ZOIDDx setup programs were originally written for PC's with 80386 processors. Newer processors run too fast for some setup programs to Download and Upload projects.

**Note:** Project editing is unaffected for all setup programs.

When installing setup programs, the ZOIDLoader utility may be installed automatically. This utility will allow proper Downloading and Uploading of projects.

**Note:** Projects cannot be edited with the ZOIDLoader utility.
